MedicsDocAssistant™ EHR
The Art of Simplifying Patient Medical Records

Keeping your patients' medical and clinical information secure and available is critical in today's world of electronic health records (EHR).

And because an EHR retains and helps manage your patients' medical information, just any EHR isn't good enough. You need one that is proven in the industry, certified, and backed by a vendor whose stability is unquestionable. In fact, in an 11/13 survey conducted by Healthcare Technology Online, *vendor viability* was named the *number one "must have"* factor in choosing an EHR.

That EHR is MedicsDocAssistant…the vendor is Advanced Data Systems. Here's why:

Stability: MedicsDocAssistant is a solidly time-tested system with over ten years of deployment the industry.

Power and Comprehensiveness:

- The system is used by medical practices of every size and of multiple specialties to handle their EHR needs.

- MedicsDocAssistant it is also used by revenue cycle management (RCM) companies for their clients' EHR needs as well!

Functionality: ADS' own WindowOne™ architecture places needed data at the user's fingertips in virtually every window view within the system.

Real Timeliness: MedicsDocAssistant operates in real time:

- Newly input data is seen across the enterprise by all authorized users, as they happen.

- "Closes" are not needed in order to update the entire system with edits made that day.

Versatility: MedicsDocAssistant can be implemented in the format that works best for you, not us!

- Cloud / ASP: MedicsDocAssistant resides on remote servers and is accessed securely over the internet; the client does not need a server at the practice.

- Customer hosted (client server): MedicsDocAssistant resides on a server located at the practice.

ADS is Named a 2013 Top 100 EHR Vendor by Medical Economics (ME)

- ME, the very prestigious and highly regarded journal and organization actually ranked ADS within the top 25 of their top 100 EHR vendors.

- Being among the top 25, when considering the more than 750 EHR vendors overall (approximately 650 didn't rank in ME's top 100) makes ADS' ranking that much more significant.

Stage 2 Meaningful Use? MedicsDocAssistant is ready right now!

- Version 7.0 is certified by ICSA Labs™ as a complete EHR for Stage 2 MU.

- A relative handful of EHRs have Stage 2 certification right now and of the ones that do, several are "modular" (not complete) EHRs.

- MedicsDocAssistant is a complete EHR for Stage 2 MU without requiring additional modules to make it so.

- MedicsDocAssistant is also certified for Stage 1 MU and has been a certified system since certifications began with CCHIT™ in 2006.

Are we there yet? The Medics MU Dashboard tells all!

- Our MU dashboard is built into MedicsDocAssistant. It is not an extra add-on (cost) module.

- The dashboard operates in real time, displaying up-to-second progress on individual physician progress (incentives are per-physician, not per-practice).

- Physicians can attest to MU as soon as the dashboard indicates their criteria has been met.

- If the practice has multiple physicians, each one can attest individually as soon as their MU criteria are satisfied. There is no need to wait for all to attest at the same time.

- The Medics MU Dashboard tracks both the required 90 days of time needed for each physician to attest as well as their individual criteria.

Medics FlowText™: game changing functionality for voice-to-data entry!

- Medics FlowText is a *built-in* capability in MedicsDocAssistant changing how dictated text is inserted into the patient's record.

- Working with Dragon Medical™, transcribed text automatically flows into the correct fields in the patient's record as part of the overall dictation, eliminating the need to manually enter that data into the record's fields.

- Physicians can now create their reports using Dragon Medical and Medics FlowText does the rest!

PCMH, CPCi, ACO? NP! MedicsDocAssistant can be used for reporting data needed in order for the practice to obtain Patient Centered Medical Home and Comprehensive Primary Care initiative status, and for ACO reporting without requiring additional add-on utilities or modules.

Can MedicsDocAssistant help us in your specialty?

- The system is specialty-specific and is excellent for all primary care specialties as well as a large number of specialty practices including Radiology and Behavioral Health.

- As such, MedicsDocAssistant is also excellent for multi-specialty practices where each provider can have his or her own specialty-specific templates

What about labs, e-Rx, and portals? Yes, yes, and yes!

- MedicsDocAssistant is integrated with a number of labs for the bi-directional transmission of orders and results. In fact, labs can be embedded and have their own tabs in MedicsDocAssistant. Physicians are notified when lab results come back for patients, and have special alerts when results are out of normal ranges.

- Electronic prescribing (MedicsRx™) is facilitated from within the patient's record, transmitting prescriptions directly to the patients' pharmacies including those for controlled substances in states permitting that.

  MedicsRx also has a comprehensive medication management capability tracking medications prescribed to patients, dosages and refills and is also able to provide alerts on allergies, interactions, and formulary coverage for the medication prescribed as it relates to the patient's insurance coverage.

- MedicsPortal ™ provides incredible ways for patients to self-serve 24 x 7 x 365. Using secure internet connectivity, patients can request appointments, view medical information as made available by the practice, complete questionnaires and "paperwork" online and communicate with the practice, and vice versa.

  Data flows directly into the patient's MedicsDocAssistant record which then only needs to be confirmed by the practice. MedicsPortal makes the practice accessible to its patients at all times, and the practice can always control the extent to which patients can use it.

- MedicsKiosk™ is also available as an in-waiting room tool for patients who did not use MedicsPortal in advance of their appointment. MedicsKiosk can be used on a tablet or laptop, or be setup as a stationary, desktop PC.

MedicsDocAssistant: Ready for ICD-10. With its built-in Medics ICD-10 Code Converter, physicians can easily select the correct ICD-10 code during the encounter from a dropdown listing based on the current ICD-9 code.

The features, capabilities and functionality provided by MedicsDocAssistant result in optimized efficiency and workflow, ROI, and reduced paperwork and redundancy.

Equally as important is that MedicsDocAssistant is produced by Advanced Data Systems, a company with an unparalleled history of stability and reliability in the healthcare automation industry.

ADS provides timely Implementation, comprehensive Training and excellent ongoing Support with updates.

Contact ADS for more information on MedicsDocAssistant, and to schedule a personalized system overview for your practice and specialty.
