

MedicsDocAssistant™ Electronic Medical Records: Elegant, Nimble, Technology for the Otolaryngology Practice

MedicsDocAssistant represents the ideal EMR for the ENT practice. With **ENT-specific capabilities**, **MedicsDocAssistant** is the perfect tool to use for automating patient encounters while reducing paperwork within *your* ENT practice.

Chief Complaint / Review of Systems

Built-in chief complaint templates — **specific to ENT** — simplify patient encounters by requiring a minimum number of entries. Special exam templates (e.g., **throat** exam, **Otitis Media**, etc.) and condition-specific templates can be created, documented, and stored for future use.

During the encounter, the Otolaryngologist is easily able to capture all ROS information electronically, directly into a tablet PC.

History

The patient's **ENT history**, including past and current medical problems, family history, medications and allergies is effortlessly stored in the system.

Assessment and Treatment Plan

This section of the system provides a **built-in database** with extensive data for assessments, treatment plans, notes, medications, and CPT codes.

Images

ENT-specific drawable images of the patient's ear, nose, throat, sinus, larynx, etc. are available to the Otolaryngologist. The ability to document common

in-office procedures, **nystagmograms**, fiber optic **laryngoscopies**, etc., directly captures videos or images from these procedures and stores them in **MedicsDocAssistant**.

Reports

An array of reports outlining lab and test results as well as **audiology findings** can be attached to the patient's record, assisting the Otolaryngologist in determining a diagnosis and treatment course.

MedicsDocAssistant can be interfaced with a variety of in-office lab diagnostic equipment as well.

Referral Letters

By easily capturing important sections of the encounter, the Referral Letter feature allows the provider to **quickly create and send completed consult letters** to other care providers via email, fax or e-fax.

Contact **Advanced Data Systems** for more information on **MedicsDocAssistant** and our full range of Practice Management solutions.
