

# MedicsDocAssistant™ Electronic Medical Records for the Internal Medicine Practice

---

**MedicsDocAssistant** is the ideal EMR solution for the Internal Medicine practice. With its dynamic ability to handle multiple patients within one family, and having powerful features for Pediatrics as well, **MedicsDocAssistant** for Internal Medicine represents an excellent tool for automating patient encounters and reducing paper. Automating your patient encounters has never been easier!

---

## History

The patient history, including past and current medical problems, family history, medications and allergies, is easily captured and stored in detail.

## My Encounters

The “My Encounters” section provides encounter information about the patient, indicating whether the encounter is signed or unsigned. It contains information such as name, appointment dates, chief complaint, and assessment.

## Encounter Review of Systems (ROS)

During the encounter the physician is able to track all ROS information showing abnormal vs. normal baselines. This can be attached to the record and shared with other health providers and specialists and consultation letters can be created on the fly.

## Medication Log

This log tracks all of the medications that have been prescribed for a patient over a physician-specified block of time.

## Encounter Form

The Encounter Form contains comprehensive information about the patient. It also provides **information**

**required by specialists or other providers** that may be needed for advanced treatments.

## Referrals

The Referrals feature enables the physician to send referral letters to other care providers via e-mail, fax, or e-fax. One or more sections of an encounter can be easily attached, creating a completed letter in minimal time.

## Lab Reports

A variety of reports showing **lab** and **test results** help the physician decide the patient’s best course of treatment.

## Messages

Using the Messages section, the physician can send messages to office administrators and staff, as well as e-mails to other care providers. The window displays a **list of all of the sent and received messages**, and contains a comprehensive **address book**.
